## Andrei ZAVADA

### General

Born 4 November, 1973 in Kharkov, USSR (now Ukraine)  
Languages English, Russian (mother tongue), Ukrainian; French and Dutch (functional)  
Married 2007, with two kids (2012, 2014)  
Home Nezalezhnosti 11, apt 45, Brovary 07400 Ukraine  
www [johnhommer.com/academic](http://johnhommer.com/academic), LinkedIn profile: [ua.linkedin.com/pub/andrei-zavada/59/967/3a2](https://ua.linkedin.com/pub/andrei-zavada/59/967/3a2),  
github: [github.com/hmmr](https://github.com/hmmr), ResearchGate profile: [researchgate.net/profile/Andrei\\_Zavada](https://researchgate.net/profile/Andrei_Zavada).  
email [johnhommer@gmail.com](mailto:johnhommer@gmail.com).  
phone +38 097 239 8278, +44 749 218 1881, [johnhommer@iptel.org](mailto:johnhommer@iptel.org).

### Degrees and Qualifications

2007 **PhD** in *Physiology* from the University of Groningen, The Netherlands. Dissertation Title: Defining and determining the properties of the human sleep homeostat. Supervisor & promotor: Domien G. M. Beersma.  
1997 **Masters** in *Entomology* from Kharkov State University, Ukraine.

### Affiliations/Employers

May 2017– <i>present</i>	<b>Id3as LLC</b> , remotely from Ukraine: <b>Software Engineer (Erlang)</b>
December 2014–April 2017	(on contract) <b>Basho Inc</b> , remotely from Ukraine, Georgia: <b>Software Engineer (Erlang)</b>
November 2013–December 2014	<b>Massive Solutions</b> , Ukraine: <b>Software Engineer (Python)</b>
June–October 2013	<b>Clove Consulting Inc.</b> , USA/Ukraine: <b>Software Engineer (C++)</b>
December 2012–May 2013	<b>eMICT/Lotosoft</b> , Ukraine: <b>Software Engineer (C++)</b>
July 2012–December 2012	<b>StrikeAd</b> , Ukraine: <b>Software Engineer (Erlang)</b>
June 2010–May 2012	<b>Massive Solutions</b> , Ukraine: <b>Software Engineer (Erlang)</b>
2008–10	University of Sussex, UK: <b>Postdoctoral research fellow</b>
2002–6	University of Groningen, The Netherlands: <b>PhD student</b>
1998–9	Schmalhausen Institute of Zoology, Kiev, Ukraine

## Skills

- Erlang/OTP: general expertise, with deeper coverage of cluster architecture and distributed databases (*actively since 2010*).
- Riak: architecture; tools & apps; GitHub-centered code organisation and workflow (*actively since 2015*).
- C++ (including C++11, excluding boost) and C: omp; strictly within glibc for all things covered; gsl, MPI; soci; pthreads; Lua (embedding) (*In use: actively since 2008*).
- Python: learn-as-you-go (*In use: actively since 2013*).
- GNU toolchain: autotools, make, gcc (*actively since 2008*). Valgrind, gdb (*occasionally since 2008*).
- git (also GitHub-specific 'extensions') (*actively since 2010*), subversion, CMake (*occasionally since 2013*).
- Jira, Redmine, Bugzilla (*regularly since 2010*).
- Packaging: Debian, OpenSUSE, Gentoo (own/primary dev system) (*regularly since 2011*).
- Linux administration (Debian, Gentoo) (*regularly since 2003*).
- PostgreSQL (*actively in 2013-2014*).
- GTK+: plain C and with Glade (*actively since 2008*).
- Emacs (*actively since 2004*).
- $\LaTeX$ , Octave, Gnuplot, Maxima, R; GIMP, Inkscape (*regularly since 2004*).
- Functional JavaScript, HTML (*occasionally since 2004*).

## Projects

- **Riak TS**, contributions to riak\_kv, riak\_ql, riak\_core, riak\_api, riak-erlang-client. The third man on a team led by Gordon Guthrie.
- **VSC** (as part of a 3-strong team), a Virtual Super Computer middleware written in Python/C++ (my part being its billing system). Abandoned at beta stage with tears due to investors withdrawing promised funds, with events of 2014 in Ukraine rumbling in the background.
- **Clustrx** (as part of a 3-5-strong team), a cluster management system written (mainly) in Erlang/OTP. This system is running on the Lomonosov HPC (other installations possibly exist).
- **Aghermann**, (public repo on **github**) a sleep-research experiment manager, with a facility for reading, displaying, and scoring EEG recordings in EDF format; power spectra analysis and visualization; and Process S simulation following Achermann et al, 1993. I am also packaging and maintaining it for Debian.
- **CNrun**, (public repo on **github**) a neuronal network simulator using NML for network description. Provides conductance- and rate-based Hodgkin–Huxley neuron models, and a number of other neurons & synapses. A 5-6-order RK method is used for integration. Very precise but slow; basic scripting capabilities. Packaged for Debian by me.
